Student Learning Outcomes

NURS 003A PERINATAL NURSING

Upon successful completion of this course, students will be able to:

1. The student will be able to integrate, correlate, and apply scientific theory in the care of the maternity and newborn patient that meets the standard of nursing practice.

2. The student will be able to demonstrate competency in the nursing process, including performing a safe patient assessment, establishing specific and appropriate expected outcomes, planning/implementing effective nursing interventions, and evaluating patient outcomes.

3. The student will be able to demonstrate the ability to perform a nursing assessment on a maternity and newborn patient safely and in a timely manner, explaining rationales for performing specific components of the assessment.

4. Exam, student project (Interview of a Pregnant Woman, Maternal Outreach Project), written exercise (nursing care plan), skill demonstration during roleplaying exercises, skill demonstration during clinical rotation at hospital.

5. The student will be able to demonstrate knowledge and understanding of medication preparation, calculation, and administration; nursing procedures; and treatments for maternity and newborn patients, adhering to principles of safety.
